Cleaning Station (Grey Color)

Auto Empty Dustbin

Enjoy a more convenient way of emptying your dustbin. Simply detach and place the dustbin on top of the Clean Station, which will automatically empty out the dust, without you having to separate the pipe or the cyclone. In addition, you have less hassle removing dust by hand.

Anti Dust Emitting Structure

Breathe pure air when emptying the dustbin. The dustbin opens when it is inserted into the Clean Station, and has an air-tight design. So it can be hygienically emptied as it prevents ultrafine dust from scattering back into the air. It is 400 times more hygienic than conventional dustbins.

5 Layered HEPA Filtration System - Certified by SLG and BAF

Ensure a hygienic room with a 5 Layered HEPA Filtration system*. A Dust Bag and Pre-Motor filter trap large and small dust. It also has an Activated Carbon deodorization filter and a Noise Absorption filter. Finally, an Ultrafine Dust filter traps 99.999% of ultrafine dust and allergens.

Air Pulse™ Technology

Empty your dustbin effectively. Air Pulse™ Technology repeatedly opens and closes the inlet of the suction motor, and makes the air pressure fluctuate like a heartbeat. The pulsating air currents shake off dust inside the dustbin, so they are removed from the dustbin effectively.
